## FEWS (Few-shot Examples of Word Sense)

- WSD models underperform on rare senses, due to a lack of data in existing WSD datasets.
- To address this data sparsity, we created **FEWS**, a new dataset for WSD drawn from dictionary example sentences.

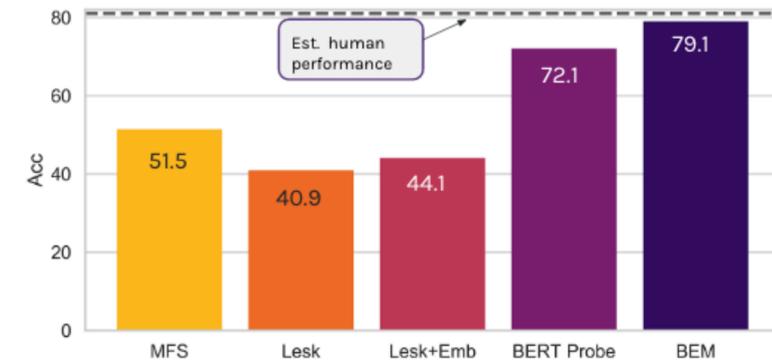

## Dataset Analysis

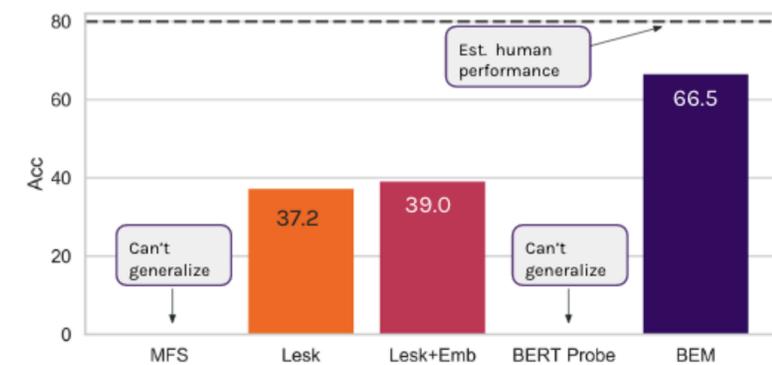

- FEWS** is a high-coverage... and few-shot dataset for WSD.
- FEWS** covers a wide range of domains, including:
  - new** domains (internet slang)
  - technical** domains (medicine, computing)

## Few-shot Baselines

## Zero-shot Baselines

## Takeaways

- FEWS** is a new dataset for few-shot training and evaluation on WSD that covers many rare senses and domains
- FEWS** improves performance on rare senses in other WSD settings
- Baselines for **FEWS** show there is room for future improvements on few-shot WSD!

 blvns@cs.washington.edu

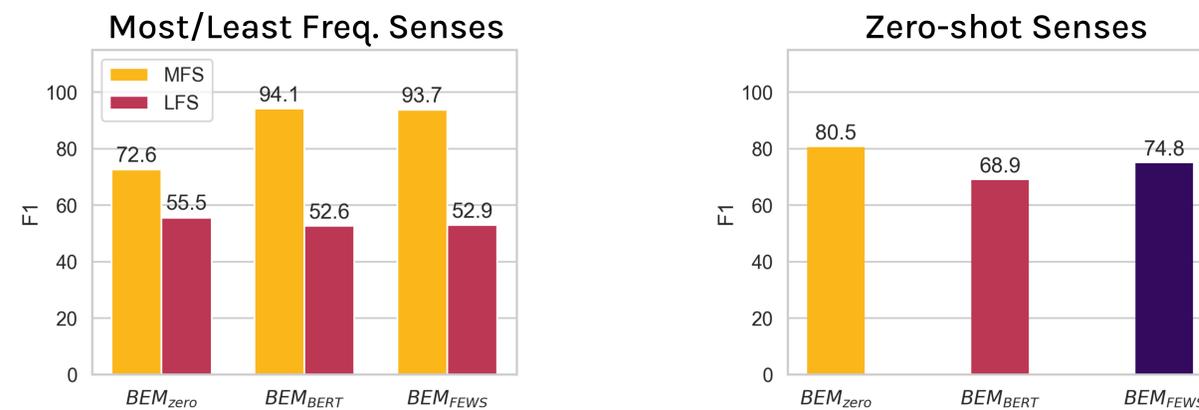

## Dataset Composition

**FEWS** is drawn from examples in English Wiktionary

Data Split		# of Examples
Train		87,329
Ext. Train		101,459
Dev	Few-Shot	5,000
	Zero-shot	5,000
Test	Few-Shot	5,000
	Zero-shot	5,000

## FEWS improves performance on rare senses!

Performance on the Unified WSD Framework with...

- BEM<sub>zero</sub>** → BEM trained only on **FEWS**
- BEM<sub>BERT</sub>** → BEM trained only on SemCor
- BEM<sub>FEWS</sub>** → BEM iteratively trained on **FEWS**, then SemCor
